

# Proposed 160 walk-around Queen Bed plan

Dr. Wes Leggett

Revised November 9, 2007

The **160WQB** (Wes' Queen Bed –or– Walk-around Queen Bed) is the **smallest** and **lightest** walk-around queen bed with a full-size tub/shower dry bath in a single axle model for the traveling couple. The compact galley just inside the entry door features a full-width window, which provides rear views, light, and ventilation. Above the window are storage cabinets. An optional microwave is located above the stovetop. Under the stovetop is a 3 cu. ft. refrigerator. Located next to the refrigerator is the floor-level furnace, which provides proximity warmth for the bath and dinette. Cabinet drawers are located above the furnace and a narrow cabinet door next to the bath wall provides access to the remaining storage area under the single-bowl sink. The bath includes a full-size tub/shower and plenty of hip, leg, and knee room for the stool. A large skylight over the tub provides additional headroom when showering. A power vent fan is located over the stool. There is ample room for undressing and dressing when the bath door is closed. A sacrifice, due to space, is a lavatory sink in the bath. However, the location of the galley sink provides convenience and the bath door swing provides privacy. The two-person dinette features plenty of leg room. A large, portable dinette folding table can be easily moved out of the way for passage and can be stored out of the way when not needed. Above both dinette seats are overhead storage cabinets. Located under the street-side dinette seat is the power converter. Under the curb-side dinette seat is a storage area, ideal for stowing footwear upon entry and retrieval prior to exit. The wheel-well incursions that extend beyond the dinette seats into the aisle area around the queen bed are carpeted for safety. Above the dinette area is the air conditioner and forward of that is the Fantastic Fan over the foot of the bed. The lift-up bed platform is sized at 60x74 for those who wish to use a shorter RV-sized mattress for additional aisle area around the dinette and wheel-wells. A standard-size 60x80 mattress can be accommodated, giving the option of using a specialized mattress, like a Tempur-Pedic®. Under the platform is a full-width pass thru storage area with both exterior and interior access. The hot water tank is located street-side adjacent to the pass thru storage area. The hot water tank framed incursion in the aisle area is carpeted to provide comfortable egress to the bed. Next to the hot water tank is the fresh water tank. Water lines from the hot and fresh water tanks run out from the corner of the bed platform to the corner of the wheel-well and then under the dinette seat to the bath and galley. Wardrobe storage drawers and a rolling storage bin fill the remaining space under the bed and provide easy access to clothing and other items, without having to lift the platform. On either side of the queen bed and above the pass thru storage area are 11" wide, shirt-sized, wardrobe closets. Above the wardrobe closets is a cabinet bunk, which provides sleeping for an adult guest or two small grandchildren. When extended, the cabinet bunk can also be used as a large flat storage area. Windows on either side of the bed provide views, light, and cross-ventilation. The street-side window is an emergency exit. The curb-side window is protected from the sun and rain when the awning is extended. An opening, screened front window is optional. While the **160WQB** requires efficient use of its compactness (galley size, food and wardrobe storage), it rewards with an easily accessible and comfortable bed and bath that can be effortlessly towed and parked nearly anywhere.
